

MicroCare Acupuncture Pen

AcuPen – A device for electropuncture

- For therapeutic stimulation of the points of the hands, feet, and the body
- Automatic search for an acupuncture point by electric conductivity of the skin.
- A sound signal at finding an acupuncture point.
- Electric stimulation of the found biologically active point (BAP).
- The device has undergone multiple clinical trials and has been found highly effective.
- Intensity can be regulated optionally. It employs high technologies that replace needles by electric impulses. Also, it is helpful for precise finding the location of acupoints.
- The device is easy and comfortable to work with, it is small-sized and weighs little, packed in a plastic box. Since it is battery-powered, it can be used anywhere: at home, at work, and even during travel.
- Purpose: Recommendation is to use in treatment of various acute and chronic disorders (methods of Chinese Zhen jiu and Korean Su Jok therapies) by action of low-frequency current on vital BAPs.
- The device
